ACADEMIC APPOINTMENTS

St. Mary's College of Maryland *2026–Present*
Assistant Professor of Financial Economics

EDUCATION

The Graduate Center, City University of New York *2020 - 2026*
PhD in Economics, Specialization in Financial Economics
Dissertation: *Essays on Financial Derivatives, Market Structure, and Inequality*

The Graduate Center, City University of New York *2024*
M.Phil. in Economics

State University of New York at Stony Brook *August 2018 - December 2019*
MSc in Finance

University of Piraeus, Greece *October 2012 - June 2017*
BSc in Economics

RESEARCH FIELDS

Macro-Finance, Equity Market Structure, Financial Stability, FinTech

TEACHING INTERESTS

Corporate Finance, Investments, Derivatives, International Finance, Financial Econometrics, FinTech

PUBLICATIONS

Angelopoulos, C., & Giannikos, C. (2025). *The effect of financial derivatives on wealth inequality. Finance Research Letters*, 72, 106587.

WORKING PAPERS

Too Few To Fail? Stock Market Concentration and Systemic Vulnerability
Stock market concentration has surged to record levels, exceeding those of the dot-com bubble and raising growing concerns among investors and regulators. I provide the first cross-country evidence on the effect of stock market concentration on systemic financial crises, using a panel of 30 major stock markets from 1998 to 2020 and systemic crisis episodes from the Global Crises dataset of the Behavioral Finance and Financial Stability project at Harvard Business School. Estimating probit models with correlated random effects (Mundlak correction) and a control-function approach that partially addresses endogeneity, I find that higher concentration significantly increases the likelihood of systemic crises, even after controlling for established macro-financial predictors. Market capitalization and credit depth emerge as the key transmission channels, with the destabilizing effect of concentration amplifying as equity markets deepen and domestic credit expands. The results are robust to alternative crisis definitions, functional forms, and first-stage specifications, and suggest that stock market concentration is an important feature associated with systemic fragility, with implications for the design of macroprudential policy.

Equity Market Structure and the Transmission of Monetary Policy (with Nijat Guliyev)
We study how equity market concentration shapes the transmission of monetary policy to financial markets and the real economy. While banking sector concentration has received considerable attention, the implications of stock market structure remain underexplored. Concentrated markets, dominated by large-cap firms, may exhibit distinct sensitivities to policy shocks compared to dispersed structures. We find that concentration changes the timing and persistence of monetary policy transmission. Under high concentration, the responses of prices, output, and equity returns are muted at short horizons but become larger and more persistent later, especially for the broader cross-section of firms.

Stock Market Concentration and the Distributional Impact of Financialization (with Georgios Koimisis)
Recent studies (Bae et al., 2021) highlight the impact of stock market capitalization concentration on real macroeconomic variables. Building on this evidence, we examine how this dimension of financial markets influences the distribution of income and wealth through financial development. The results show that stock market concentration significantly increases inequality, disproportionately channeling financing to large firms, raising the income share of the top percentiles, and reducing that of the bottom 50%.

Do Financial Derivatives Widen the Income Gap? (with Christos Giannikos)
The growing use and importance of financial derivatives in global markets raise new questions about their impact on distributional outcomes. We examine the relationship between exchange-traded derivatives and income inequality (Gini and percentile ratios) and show that income-inequality dynamics differ from wealth-inequality dynamics. While prior work links other financial instruments to inequality, evidence on derivatives is limited; we provide evidence that greater exchange-traded-derivatives activity is associated with rising top-income shares and a decline in the bottom-half share.

WORK IN PROGRESS

Index Weight Limits and the Prices of Mega-Cap Stocks
Using index weight-capping events such as the July 2023 Nasdaq-100 special rebalance, I study how the price elasticity of demand for mega-cap stocks influences their prices and, in turn, the pricing of equity indices.

Exchange Concentration and Liquidity in Cryptocurrency Markets (with Xiaochuan Tong)
We investigate how concentration among cryptocurrency exchanges affects market liquidity.

GRANTS AND AWARDS

Mario Capelloni Dissertation Fellowship	*2025-2026*
Summer Research Travel Grant, China at CUNY Initiative	*2025*
Graduate Center Doctoral Student Research Grant	*2025*
Graduate Center Conference Presentation Award	*2024*
Provost's Pre-Dissertation Research Fellowship	*2024*
Stone Center on Socioeconomic Inequality, Junior Scholar Fellowship	*2023-2024*
Ray Quinlan Award	*2023*
Sallie Mae Award	*2022*

CONFERENCES

FMA Annual Meeting, Tampa, USA	*2026*
New York State Economics Association Annual Meeting, Oneonta, USA	*2026*
Southwestern Finance Association Annual Meeting, Dallas, USA	*2026*
FMA Annual Meeting, Vancouver, Canada	*2025*
International Symposium on the Advancement of Financial Economics, Beijing, China	*2025*
Early Research Initiative Conference, CUNY Graduate Center	*2024*
22nd Conference on Research on Economic Theory and Econometrics, Milos, Greece	*2024*

TEACHING EXPERIENCE

St. Mary's College of Maryland *2026–Present*
Assistant Professor, Corporate Finance, International Finance, Analyzing Financial Data
Course Development, Fintech, AI, and the Future of Finance (ECON310, first offered Spring 2027)
Advisor, Student Final Projects in Finance

Baruch College, Bert W. Wasserman Department of Economics and Finance *2022–2026*
Teaching Assistant, Econometric Methods for Business Research II, DBA Program
Lecturer, Starting and Developing a Dissertation Workshop, DBA Program
Advisor, Dissertation Research Proposal, DBA Program

Columbia University, School of Professional Studies *2020–2023*
Associate, Security Analysis & Options and Futures

Fordham University, Department of Economics and Gabelli School of Business *2022–*
Adjunct Lecturer, Statistical Decision Making, Principles of Macroeconomics

Baruch College, Paul H. Chook Dept. of Information Systems and Statistics *2021–2026*
Adjunct Lecturer, Business Statistics I

Hunter College, Department of Economics *2025*
Adjunct Lecturer, Public Finance

City College, Colin Powell School for Civic And Global Leadership *2021–2023*
Adjunct Lecturer, Intermediate Microeconomics, Principles of Macroeconomics

The Graduate Center, Department of Economics *2021–2023*
Teaching Assistant, Econometrics, PhD Program

INDUSTRY EXPERIENCE

Snyder Capital Management *2020*
Financial Planner, Internship

Alpha Bank, Greece *2018*
Credit Risk Data Analyst

SERVICE ACTIVITIES

Graduate Student Member of the following committees at the CUNY, Graduate Center:

Executive Committee, Economics Department *2023*
Curriculum and Exam Committee, Economics Department *2023*
Doctoral Council Representative *2023*

PROFESSIONAL SKILLS

Computer Languages Python, R, MATLAB
Software & Tools SQL, Stata
Languages Greek (Native), English (Fluent), French (Intermediate), Mandarin (HSK3)
